

DATALEERT

Security Analytics for Your Data

Spot threats before they become breaches.

Security analytics with deep data context

Confidently answer the question **“Is my data safe?”** with continuous monitoring and alerting on your core data and systems. Varonis is the only solution that combines data classification and access governance with UEBA, giving our threat models richer context and more accurate alerts.

Detect unusual file and email activity, suspicious user behavior, and trigger alerts cross-platform to protect your data before it's too late. Automatic response triggers can stop ransomware in its tracks, and mitigate the impact of compromised accounts and potential data breaches.

Protect your data wherever it lives.

DatAlert gives you actionable intelligence and security analytics on your data: analyze behavioral patterns to see when a user is acting suspiciously - and compare their activity against their peers, their normal working hours, and their typical behavior.

Don't rely on signatures

Our dedicated team of security experts and data scientists continually introduce new behavior-based threat models to monitor patterns, track the latest APTs, and keep your data safe.

Investigations & forensics

Visualize security threats with an intuitive dashboard, investigate security incidents - even track alerts and assign them to team members for closure.

Want to go even further? Rewind to see incidents from the past, identify breaches that may have already occurred, and pre-emptively tune out false positives.

Achieve regulatory compliance

Prove to auditors that you're not just watching regulated data, but proactively protecting it. Track, monitor, and automatically alert on regulated data to pass audits for PCI-DSS, GDPR, HIPAA, SOX, GLBA, FISMA, and more.

Get the big picture

Knowing something's amiss isn't enough - so get the full picture with context: see how unusual behavior maps to incidents and activity across platforms.

Get a holistic view of what's going on: see user actions, monitor their behavior, and automatically compare against peer behavior.

100+ threat models and growing

Unusual mailbox and email activity

Abnormal lockout behaviors

Attempts to damage and destroy operational files

Suspicious access activity

Mass delete behaviors

Modifications to critical files and units

Sends alerts to your favorite apps

ArcSight

splunk

Radar

FireEye

LogRhythm

LIVE PRODUCT TOUR

Get complete **visibility** and **control** over your data.

See why more than 6,300 of the world's best companies use Varonis to protect their data from insider threats and cyberattacks.

Scale, speed, agility

As the market leader, our data security platform scales like no other. Varonis has been battle-tested for more than a decade on networks with billions of events per day across petabytes of data. You won't even know we're there.
