

Business Value Realisation Assessment

Our partner's Business Value Realisation Assessment (BVRA) is offered as a complimentary service by our dedicated Business Value Consultancy (BVC) team. BVRA is designed to help organisations identify current challenges, realise the full value of their solutions, and uncover new potential use cases.

BVRA engagements are fully customised to your organisation and can be tailored based on environment size, complexity, and specific requirements. This allows you to gain actionable insights, optimise processes, and make informed decisions to maximise the impact of your solution.

Scoping Session

An initial session to determine the areas you want the BVRA to cover and define the scope of the final output. This ensures the engagement is tailored specifically to your organisation's needs.

End User Interviews

Interview-style sessions with relevant end user groups (typically 30–40 minutes per group) to gather feedback and insights into current usage, challenges, and potential opportunities.

Statistical Analysis

A data-driven review of current processes and solution usage to provide an objective view of performance, adoption, and potential gaps.

Analysis & Final Feedback

A comprehensive assessment combining statistical analysis and end user feedback to produce a final document. This includes actionable recommendations, potential new use cases, and proposed next steps.

Business Case & Expansion Planning

The BVRA output can form the foundation for a business case or guide further technical analysis and solution expansion within your organisation.
