

VARONIS INTERCEPTOR

AI-native email security with the best detection rate on the planet.

A new breed of threat.

AI has enabled a new breed of email threats that are more deceptive than ever. Hackers are flooding users with social engineering attacks across email and tools like WhatsApp and Slack. Organizations need AI to combat malicious AI.

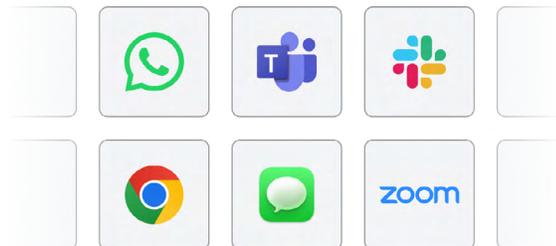

Predictive AI that sees what others can't.

Varonis Interceptor catches advanced business email compromise, social engineering, and phishing attacks that other products simply can't see. Interceptor uses multiple specially trained predictive AI models to see through evasive tactics and remove threats from inboxes in real-time.
